

What's New in Analyzer Version 6.0

Based on 25 years of innovation excellence, Arbutus delivers the very best in purpose-built audit analytics technology to meet the exacting demands of today's business environment. Auditors, business analysts, and fraud investigators rely on Arbutus audit software to enhance their testing, analysis, and compliance capabilities.

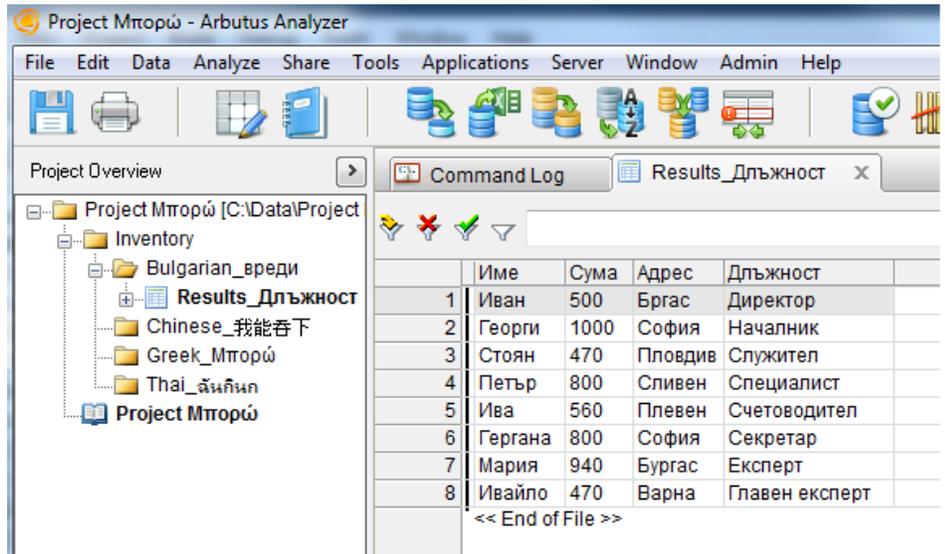

"We prefer the use of Arbutus Analyzer over other analysis tools in our various forensic investigation projects."

Mike Mumford,
Luminescent Inc.

Version 6.0 of Analyzer features numerous innovative and useful enhancements, including:

Full Unicode Support

Analyzer 6.0 now offers full Unicode support (UTF8 and UTF16) for all languages, as well as full keyboard support for Unicode with the Data Definition Wizard, the Command Line in the Command Log, the Procedure Editor, and more. Foreign file names (such as those in Chinese or Cyrillic) are now also supported.

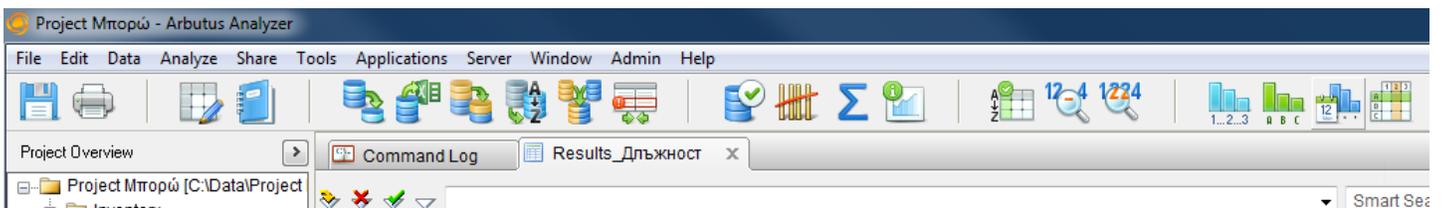

The screenshot shows the Arbutus Analyzer interface with a menu bar (File, Edit, Data, Analyze, Share, Tools, Applications, Server, Window, Admin, Help) and a toolbar. The Project Overview pane shows a tree view of a project named 'Project Мтρω' with subfolders like 'Inventory', 'Bulgarian_вреди', 'Results_Длъжност', 'Chinese_我能吞下', 'Greek_Μтρω', and 'Thai_ฉันกิน'. The Command Log pane shows a table with the following data:

	Име	Сума	Адрес	Длъжност
1	Иван	500	Бургас	Директор
2	Георги	1000	София	Началник
3	Стоян	470	Пловдив	Служител
4	Петър	800	Сливен	Специалист
5	Ива	560	Плевен	Счетоводител
6	Гергана	800	София	Секретар
7	Мария	940	Бургас	Експерт
8	Ивайло	470	Варна	Главен експерт

<< End of File >>

Button Bar

The redesigned icons on the Button Bar are now larger, facilitating at-a-glance recognition. Users can also make the icons large or small via: **Tools > Options > Interface**

What's New in Analyzer Version 6.0

Project Overview

- **Overview Explorer:** You can now expand the Overview with a click, to allow easy object management, such as mass deletion or movement, as well as renaming of project items from within a project folder or from the project root.

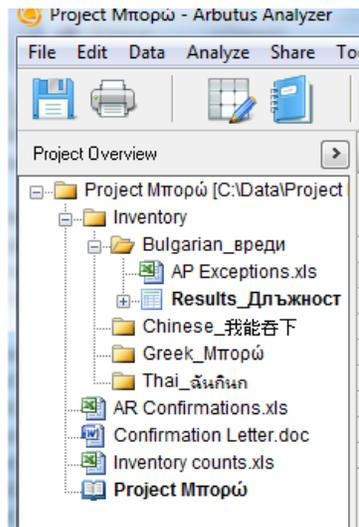

The expanded Overview has a visual appearance similar to Windows Explorer.

- **Arbutus Repository:** You can now use Analyzer as a repository for documents from other applications.

Documents from other applications (such as Excel) can now be launched directly from Analyzer, with just a click.

As you can see from the image on the right, we have included Microsoft Word and Excel documents in the Overview. Mapped file types such as these will be displayed in the Overview, and when clicked, will open the mapped file in the desired third-party application.

To support this, an Overview tab has also been added to **Tools > Options** that enables mapping of external file types to third-party applications.

"I have been using Analyzer daily for over 2 years now. Their response to enhancement requests is better than any other tool I have ever used."

Jean-Guy Pitre, CFE, CISA
Wireless Express

Improved Commands

- **Export** – Schema support has been added in command mode for ODBC export types so that an optional schema can be specified as "TABLE schema.table". Additionally, exporting to Excel for blank dates will now output blank dates instead of traditional '1900101'
- **Stratify** – You can now stratify on elapsed times
- **Directory** – The Command Log output for the Directory command has been enhanced to support tabular output.
- **SQL** – V6.0 now supports USERID and PASSWORD parameters for scripting
- **Notify Command and Notify Options** – The Notify command dialog has been enhanced and simplified:
 - A new Notify Options tab in the Tools > Options dialog allows a single point of entry for entering and storing the permanent sender and password, as well as the primary and secondary mail servers; mail servers are now entered manually
 - The default outgoing e-mail port (587) can now be modified as necessary
 - Note: The password entered is encrypted and stored in the local machine's registry.

What's New in Analyzer Version 6.0

View

- The View filters for every table layout now 'remember' the last 20 named or ad-hoc filters used, for quick and easy re-use.
- A new View right-click option allows you to Resize All Columns at one time.

Consolidated and Expanded Global Font Settings

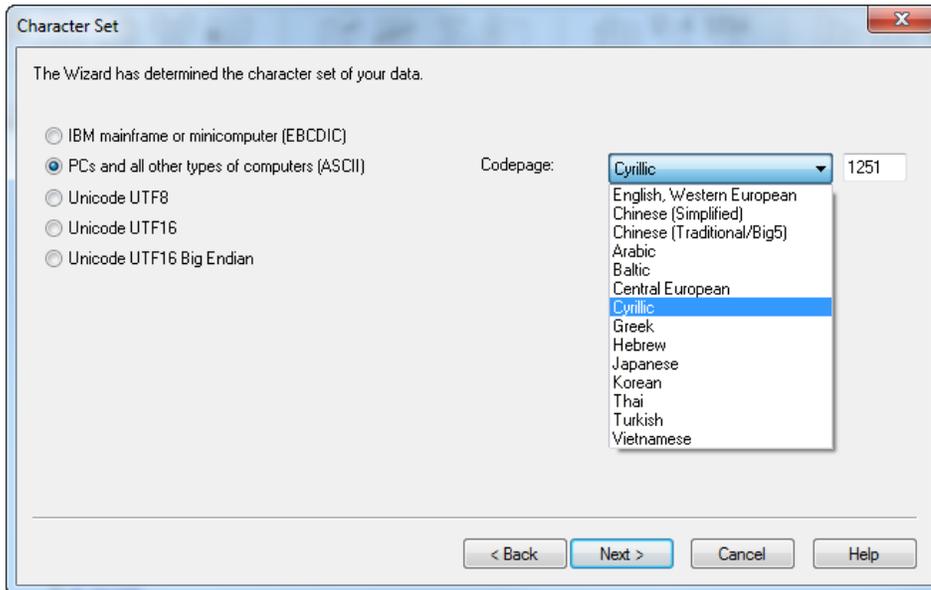

Font control has been streamlined to be more efficient in Version 6.0. All font control is now global and is accessed via the **Tools > Options > Font** tab. Global fonts now apply to the Command Log, Procedure Editor, and Overview Pane, and to new Views. Font control is no longer accessible via the Windows menu or the **Tools > Options > Editor** tab controls. Non-North American fonts are now supported via the font selector from the **Tools > Option > Font** tab.

Relations Dialog for Multiple Selection of Child Tables

The Add Tables dialog in the Relations dialog now allows multiple selection of child tables via CTRL or SHIFT key options.

New ASCII Code Page Selector in Data Definition Wizard

When reading ASCII data that is not in the local language, a new code page drop-down list in the Character Set panel of the Data Definition Wizard now specifies the code page for the desired ASCII language.

Command Support for Presorting when Reading Live Data

Gaps, Duplicates, Join, and Merge now offer presorting when reading live data.

Main Menu

A new Find option in the Edit menu enables users to search within the active Command Log or Procedure tab.

Servers – Enterprise Edition

- **Scheduling Dialog for Admin Interface** – A new Edit right-click option in the Admin Tool for the Scheduling dialog enables the Administrator to edit the attributes of a scheduled job. Additionally, a new Stop Process right-click option has been added to the Admin Tool for the Scheduling dialog to enable the administrator to halt a scheduled job that is currently running
- **Disconnect for Arbutus Servers** – A new “Disconnect All” button in the **Server > Disconnect** dialog enables disconnection of all connected servers

“There are many components to the Arbutus advantage, including easier administration, more robust features, and a sincere willingness to listen to the customer. Anyone who is in the audit analytics field should strongly consider what Arbutus offers.”

Matt Howell, ACDA, CISA, CPA

Senior IT Auditor

Based on 25 years of innovation excellence, Arbutus delivers the very best in purpose-built audit analytics technology to meet the exacting demands of today's business environment. Auditors, business analysts, and fraud investigators rely on Arbutus to enhance their testing, analysis, and compliance capabilities.
